

The Farm dairy herd into which the anthrax has made its destructive way is the result of 12 long years of consistent labor, according to En Oi Farm, brother of the owner of the herd.

"He began building that herd of 130 just about 12 years ago with only one heifer," said En Oi Farm in commenting on his brother's misfortune. "Today the herd may be worth nothing for all we know."

The Farm dairy is located at Moiliili. Anthrax broke out in the herd not long ago and since that time it has been under strict quarantine, and may not be saved.
